EXTRUDED ALUMINUM

Extruded aluminum is used on window exteriors to provide additional protection and minimize maintenance compared to an all-wood window. Aluminum can either be extruded or roll-formed, and the difference in strength can be compared to an industrial chair versus an inexpensive lawn chair. Extruded aluminum is preferred for cladding because of its strength and weather resistance. It's important to remember that clad windows and doors are different from products that have all-aluminum frames, which are typically less energy-efficient than the alternatives.

A significant benefit of extruded aluminum on the exteriors of windows and doors is their low maintenance durability that doesn't require repainting during the product's lifetime. We are committed to meeting the highest industry standards for color retention and chalk resistance, and our extruded aluminum finish maintains its shape and stands up to the elements years after installation—protected by our 20-year warranty.

Benefits of Extruded Aluminum

- Long-lasting color and performance
- Can create custom profiles, providing flexibility in matching details without compromising on performance
- Offers a low-maintenance alternative to wood

The Marvin Materials Difference: Extruded Aluminum

Marvin's extruded aluminum meets the highest American Architectural Manufacturers Association (AAMA) 2605 standard, which requires 10 years of color retention and chalk resistance. We also offer a 20-year warranty on clad finish against loss of adhesion, chalking, or fading.*

Marvin's aluminum cladding goes through a five-step pre-treatment process, which promotes excellent adhesion of the factory-applied, 70% PVDF fluoropolymer paint finish. Thanks to precision cutting and fabrication processes, extruded aluminum can also fit a range of profile widths, including applications that call for extremely wide casing profiles or historic profiles.

Marvin's durable paint finish is available in 19 rich standard colors, as well as nearly unlimited custom options.

**Loss of adhesion is covered for 10 years in coastal application.*
