OVERVIEW

James Hardie HardiePlank® Cedarmill® Fiber Cement Lap Siding has a woodgrain appearance making it ideal for exteriors where a traditional wood siding look is desired. ASTM E136 noncombustible cladding will not attract pests including termites and woodpeckers. HZ5® engineering means it is made to withstand temperature fluctuations, snow, ice, freezing temperatures and hail. Board is factory primed using a primer with a slight green hue. To finish, apply an acrylic, water-based exterior house paint to the primed board within 180 days of installation.

- Use James Hardie® Fiber Cement Siding to design or remodel a home's exterior
- HardiePlank® fiber cement siding is Engineered for Climate® allowing boards to hold up to harsh weather conditions in the environment where it is installed
- Use a 2-1/2 in. siding gun or siding nailer to attach to wood, steel or masonry substrates
- Cedar look siding board has a woodlike grain finish for a natural wood look
- 5/16 in x 7.25 in x 12 ft Cedarmill® lap board installs horizontally and resists pests that can damage wood siding
- Cut outdoors using a circular saw with a fiber cement saw blade and a vacuum dust collection system
- Fiber cement siding up to 7/16 in. may also be cut outdoors using an electric fiber cement cutting shear
- Board resists damage from cold, snow, ice and drastic temperature

New Construction Vinyl Window Collection

Beauty and Performance Designed for Your Homes

The new 1700 and 1900 Series new construction windows offer classically inspired solutions to meet the ever-changing aesthetic, architectural and budgetary needs in new construction.

Solid vinyl construction with fusion-welded corners provide added strength, energy efficiency and weather-tight performance.

Block and tackle balances stand up to the debris of a construction site.

Reinforced meeting rail for superior structural performance.

Cam-style lock with adjustable keeper for increased security.

Sloped sill for a contemporary look and enhanced water management support.

Single frame construction on several combo units reduces potential water entry points. Available in twin and triple single and double-hung, as well as 3-lite sliding units.

Convenient Egress sizes in 3050 single-hung, 4040 single-sliding and 3052 double-hung.

Multiple glass pack options to meet the thermal and energy-efficiency needs of any region.

Interior glazed fixed lites provide convenient access from the inside should the glass need to be replaced.

Drywall pass-through model available for convenient higher floor sheet drywall entry point.

Primed wood jamb extensions are available to support four exterior wall construction depths and reduce interior trim work. 4-9/16", 6-9/16", 7-1/16" and 7-9/16" options are available.

Convenient 1/2" or 5/8" drywall return channel offers an alternative to wood trim and caulking.
